

To open a new Activity on the click of a button, just add the following method to your activity,

OPEN ACTIVITY ON
BUTTON CLICK

```
public void button_click(View view) {  
    Intent intent = new Intent(this, ActivityName.class); //ActivityName is the  
    name of the activity you want to launch on button click  
    startActivity(intent);  
}
```

and call it when the button is pressed by adding the following line(attribute) to the button in your xml/layout file:

```
android:onClick="button_click"
```

Alternatively, instead of the above solution, you could just create an object of Button type and then define an OnClickListener as shown below:

```
Button button=(Button)findViewById(R.id.button);  
  
button.setOnClickListener(new View.OnClickListener() {  
    @Override  
    public void onClick(View v) {  
        Intent intent = new Intent(this, ActivityName.class); //ActivityName is the  
        name of the activity you want to launch on button click  
        startActivity(intent);  
    }  
});
```

Manas Sharma

PhD researcher at Friedrich-Schiller University Jena, Germany. I'm a physicist specializing in theoretical, computational and experimental condensed matter physics. I like to develop Physics related apps and softwares from time to time. Can code in most of the popular languages. Like to share my knowledge in Physics and applications using this Blog and a YouTube channel.
