

First of all make sure that you have an assets folder in your project with this location. Then create a folder named 'Fonts' inside it and paste the font file there. So that the font file has a location like this: `app/src/main/assets/fonts/font.ttf`

You can download the font files which are in `.ttf` format from [Google Fonts](#) or any other website.

Then add the following code to the activity.

First, get the reference of the text view in the code. Its syntax is given below –

```
TextView tx = (TextView)findViewById(R.id.textview1);
```

The next thing you need to do is to call static method of Typeface class `createFromAsset()` to get your custom font from assets. Its syntax is given below –

```
Typeface custom_font = Typeface.createFromAsset(getAssets(), "fonts/font name.ttf");
```

The last thing you need to do is to set this custom font object to your TextView Typeface property. You need to call `setTypeface()` method to do that. Its syntax is given below –

```
tx.setTypeface(custom_font);
```

So your complete code looks like this:

```
TextView tx = (TextView)findViewById(R.id.textview1);
Typeface custom_font = Typeface.createFromAsset(getAssets(), "fonts/font name.ttf");
tx.setTypeface(custom_font);
```
